DATEVRA — CAFÉ LISTINGS IMPLEMENTATION

Single-file Google AI Studio prompt with café details and all original PDF photographs embedded

HOW TO USE: Upload this one PDF to the existing Datevra project in Google AI Studio, then ask it to follow the implementation prompt in this document. The café photos are embedded in the same PDF.

CAFÉ DETAILS FROM THE SOURCE PDF

1. Café Hot Stag
Address: 1st Floor, Opp. Deer Park, Ayyappa Temple Road, Dilshad Garden, Delhi-110095

2. KARMALA CAFE & RESTAURANT
Address: Tsampa House, 5th Floor, Plot Nos. 18 & 19, Gate No. 3, Majnu Ka Tilla, New Aruna Nagar Colony, Delhi-110054

3. The Yumm Club
Address: Shop no-G5, Aditya Arcade, C Block, Preet Vihar, Delhi, 110092

Additional source instruction: “Please add sliding effect between photos.”

READY-TO-PASTE IMPLEMENTATION PROMPT

You are working inside the existing Datevra website codebase. Implement ONLY the three café listings and café-photo sliding experience specified in this PDF. The café names, addresses, and original photographs are all included in this same PDF. First inspect the existing application, routes, café-related pages/components, data models, Supabase integration, storage conventions, and current admin/public café workflows. Reuse and extend the existing implementation wherever possible. Do not create a parallel café system or duplicate routes, tables, components, or booking flows.

SOURCE OF TRUTH — CAFÉ RECORDS
Use the three café records printed above and the photographs embedded in the following photo appendix. The image grouping in this PDF is:
- Café Hot Stag: 4 photographs, extracted from source PDF pages 1–2.
- KARMALA CAFE & RESTAURANT: 4 photographs, extracted from source PDF pages 3–6.
- The Yumm Club: 4 photographs, extracted from source PDF pages 8–11.
Keep each photograph with its corresponding café. There are 12 original photographs total. Do not mix photos between cafés.

IMPORTANT SOURCE LIMITS
The source provides café names, addresses, and photographs only. Do not invent descriptions, cuisine, menu items, prices, ratings, opening hours, phone numbers, website links, facilities, offers, booking availability, or other business claims. If the existing application requires optional fields, leave them blank/null or use its existing safe optional-field behavior. Do not fabricate data to satisfy required fields; report genuinely required missing fields before attempting a risky workaround.

IMPLEMENTATION REQUIREMENTS
1. Add these three cafés to the existing Datevra café listing experience so they appear in the appropriate public-facing listing and, where the current architecture requires it, the existing admin café management area.
2. Use all 12 original photographs embedded in this PDF. Extract/import the actual images and ensure each of the four images is linked to its correct café. Preserve image quality and aspect ratio; use responsive cropping only where the existing design already does so.
3. Implement a smooth, touch-friendly photo slider/carousel for each café’s photos. Users must be able to swipe horizontally on mobile/tablet and use clear previous/next controls on desktop where appropriate. Include pagination dots or another subtle position indicator if consistent with the existing UI. Sliding must change photos within the same café only.
4. Make the slider accessible: meaningful alt text based only on café name and image sequence, keyboard-operable controls, visible focus states, and appropriate button labels such as “Previous photo” and “Next photo”.
5. Handle one-photo and multiple-photo cases gracefully. Do not show broken controls when a café has only one image. Avoid aggressive autoplay; prefer user-controlled sliding. Reuse an existing suitable carousel component if available.
6. Use the project's existing image/storage strategy. Avoid adding a third-party image library unless necessary. Do not expose private storage credentials or service-role keys in frontend code.
7. Preserve all existing café functionality, including detail pages, admin controls, filters, booking/application flows, and database relationships. Do not change booking rules, prices, commissions, payment logic, or unrelated café behavior.
8. Preserve Datevra's existing visual theme and design system exactly. Do not change branding, logo, colors, typography, gradients, spacing, layout, components, animations elsewhere on the site, or global styles. The only new motion should be the requested café-photo sliding interaction, styled to match existing Datevra patterns.
9. Ensure the café listing and slider work responsively on mobile, tablet, and desktop without horizontal page overflow or breaking surrounding layouts.
10. Avoid unnecessary database migrations. First determine whether the existing café data model and Supabase tables can store these records and image references. If a migration or storage bucket change appears necessary, do not apply it or execute SQL; explain the exact requirement and stop for approval. Do not make production database changes.
11. Do not alter authentication, user profiles, matchmaking, chat, payments, commissions, subscriptions, admin permissions, or any unrelated feature.

12. Do not commit, push, deploy, change hosting settings, or modify production configuration. Work only in the current Google AI Studio workspace.

VALIDATION
- Run available type checks, lint checks, tests, and production build.
- Verify all three café names and addresses render accurately.
- Verify all 12 supplied photographs are accounted for: four per café, correctly associated.
- Test previous/next controls, swipe gestures, photo indicators, and one-image behavior.
- Check responsive behavior at narrow mobile, tablet, and desktop widths.
- Confirm existing café admin, detail, and booking-related behavior has not regressed.
- Review the diff and ensure changes are limited to café listing data, image assets/storage references, and café slider components/styles directly required for this task.

FINAL REPORT
Return: (A) files created/modified; (B) where the cafés appear; (C) confirmation of 12 images and four per café; (D) whether any migration or manual Supabase/Storage action is required — if yes, do not perform it and wait for approval; (E) tests/build results; (F) any blockers; (G) confirmation that no unrelated features, production data, commits, pushes, or deployments were changed.

Do not claim completion for anything that could not be verified. If image extraction or café-to-image grouping fails, stop and report the exact issue rather than guessing.

ORIGINAL CAFÉ PHOTOGRAPHS — EMBEDDED IN THIS PDF

These are the actual images extracted from the user's original Cafe lists.pdf. Keep the grouping shown below when importing them.

CAFÉ HOT STAG — 4 photographs
